lunarlogic.ai

PRODUCT USE CASES

Collect the money you've already earned.

Four connected modules that move revenue from one column to another, from *outstanding* to *collected*, faster, more consistently, and without anyone chasing payments. Built for service businesses, and designed to automate on the tools you already run.

84%	40%
FASTER INVOICE PROCESSING	AVERAGE DSO REDUCTION

Typical outcomes across the four-module AR suite, most within the first 90 days of go-live.

OVERVIEW

The problems we're solving

The revenue is already earned; the cash just sits trapped on an aging report instead of in the bank. It is one manual order-to-cash workflow, and at every handoff below, time and cash leak out, widening the gap between finishing the work and collecting it.

THE COST OF THE STATUS QUO

45–60	500+	1.5–2.5%	14 days
DAYS DSO ON NET-30 TERMS	HOURS A YEAR ON MANUAL AR	OF REVENUE LOST TO BAD DEBT	TO CLOSE THE BOOKS

TODAY'S MANUAL ORDER-TO-CASH

Quote re-keyed by hand → **Invoice** built manually → **Sent** days later → **Follow-up** forgotten → **Cash trapped** DSO climbs

transcription errors · 3–5 days of lag · no consistent chase · no real-time view

Every handoff adds days between doing the work and collecting the cash.

01 Invoicing eats the day

Every invoice built by hand, about 19 minutes each, delaying the cash behind it.

02 Late payments go unchased

Inconsistent follow-up lets invoices age, DSO climb, and receivables slip into bad debt.

03 Quotes stall in the inbox

PDF quotes re-keyed line by line, about 35 minutes each, slowing every deal.

04 AR is invisible until close

No live aging or forecast; the true picture only appears at month-end.

THE METRIC THAT MATTERS

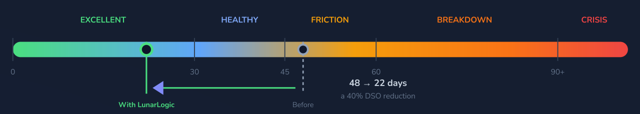
Every one of those problems shows up as a single number

It's called **Days Sales Outstanding (DSO)**: the average number of days between earning revenue and collecting the cash. Revenue is a promise; cash is the reality. DSO is the gap between them, and it's the leading indicator of financial health, not a lagging one.

$$\text{DSO} = \left(\textit{Accounts Receivable} \div \textit{Credit Sales} \right) \times \text{Days}$$

Example: **$150,000** in unpaid invoices ÷ **$150,000** invoiced last month × 30 days = a **30-day** DSO, a full month, on average, waiting to be paid.

WHERE YOU STAND · NET-30 BENCHMARK



THE DSO GAP = RECOVERABLE CASH

~$60K

The distance between your actual DSO and best-in-class is pure, recoverable working capital. For a **$2M** business, every **10-day** reduction frees roughly **$55K–$65K**, permanently. It doesn't arrive as one check; it simply stops leaving.

HOW THE FOUR MODULES COMPRESS DSO

Invoice Automation	eliminates invoice lag	3–8 days
Payment Reminders	ends inconsistent follow-up	5–10 days
Sales Order Processing	stops quote-to-invoice drift & disputes	4–7 days
AR Dashboard	removes the visibility blind spot	2–4 days

15–25 days

Typical DSO reduction from the combined stack. And it matters: 82% of business failures trace to cash-flow problems, not lack of revenue. (U.S. Bank / SCORE)

01 INVOICE AUTOMATION

From job done to invoice sent

Slack message in, QuickBooks invoice out, in under 90 seconds.

THE PROBLEM

Every invoice is assembled by hand: pull the job details, look up the customer in QuickBooks, key the line items, double-check the amount, then send. It takes about 19 minutes each, and until it's done, none of that cash is on the clock.

THE SOLUTION

A single Slack message, a quick note or an uploaded PDF, is the only input. AI extracts the customer, amounts, and line items, validates the customer in QuickBooks, drafts the invoice, and routes it for one-tap approval before sending. Every invoice links back to its Slack message for a complete audit trail.

WORKFLOW

SLACK TRIGGER

Job Completed — note or PDF upload → **AI Extraction** — customer · amount · items → **QuickBooks Invoice** — 1-tap Slack approval → **Sent to Customer** — via QuickBooks email

≈ 90 seconds

Slack and QuickBooks shown as an example. **lunarlogic automates on the stack you already run**: triggered from Slack, Teams, email, or a form, and written to QuickBooks, Xero, or your accounting system.

84%
TIME REDUCTION
19 MIN → 3 MIN

98%+
EXTRACTION ACCURACY

<90s
SIGNAL TO SENT INVOICE

RESULTS

Invoice processing time drops **84%**, and every invoice posts to the books with a complete, linkable audit trail back to its originating Slack message.

TANGIBLE BENEFITS

A firm sending **200 invoices a month** saves about 16 minutes on each one, roughly **53 hours every month**, or 640+ hours a year of administrative and accounting staff time redirected from data entry to client work. Same-day invoicing also starts the payment clock days earlier on every job.

~53 hrs
SAVED / MONTH

~$32K
LABOR / YEAR*

02 PAYMENT REMINDERS

Consistent follow-up, zero manual email

Set the sequence once. It chases every invoice, and stops the moment you're paid.

THE PROBLEM

Payment follow-up depends on someone remembering to do it, so it happens unevenly. Invoices drift past due, DSO climbs, and a slice of receivables quietly turns into bad debt that never comes back.

THE SOLUTION

A five-tier reminder sequence runs automatically on every open invoice, escalating in tone as an invoice ages. Emails send from your own Outlook inbox with delivery and open tracking, and the sequence auto-pauses the instant a payment is detected, so no one is ever chased for money they've already paid.

ESCALATION TIMELINE

DAY 1	DAY 7	DAY 14	DAY 21	DAY 30
Friendly	**Reminder**	**Follow-up**	**Firm notice**	**Final notice**
heads-up	due now	past due	action needed	escalation

Payment detected → sequence auto-pauses

Reminders send from your own email, Outlook, Gmail, or your provider, so nothing changes for your team or your customers.

70%
LESS BAD DEBT
2% → 0.6%

40%
DSO REDUCTION
50 → 30 DAYS

99.2%
EMAIL DELIVERY WITH OPEN TRACKING

RESULTS

Consistent escalation cuts the bad-debt rate **70%** and drives a **40% DSO reduction**, so cash arrives weeks sooner with no added collections headcount.

TANGIBLE BENEFITS

On **$500K** of annual receivables, trimming bad debt from 2% to 0.6% recovers roughly **$7,000 a year** that used to be written off. A 20-day DSO improvement on the same book frees about **$27,000** in working capital, cash off the balance sheet and back in the business.

03 SALES ORDER PROCESSING

PDF quote in, QuickBooks estimate out

The same extraction engine, applied to the front of the sale.

THE PROBLEM

Sales orders and quotes land as PDFs and get re-typed into QuickBooks line by line, around 35 minutes each. Every manual transcription is a chance for a wrong price or quantity, and quote turnaround stretches into days while a deal cools.

THE SOLUTION

Drop the PDF into Slack. AI reads every line item, price, and term with 92%+ accuracy, matches products and milestones in QuickBooks, and builds a ready-to-send estimate for one-tap approval, the same visual pipeline as invoice automation, run at the top of the funnel.

OUTPUT

QuickBooks Estimate Out

35 min → 4 min

Shown with QuickBooks. **Estimates flow into QuickBooks, Xero, or your ERP** the same way, from quotes in any format.

89%
TIME REDUCTION
35 MIN → 4 MIN

92%+
EXTRACTION ACCURACY

95%
FEWER DATA-ENTRY ERRORS

RESULTS

Estimates that once took most of an hour now take minutes, with a **95%** drop in transcription errors and a **24–48 hour** improvement in quote turnaround, deals move while they're still warm.

TANGIBLE BENEFITS

A firm turning around **60 quotes a month** reclaims about 31 minutes on each, roughly **31 hours a month**, or 370+ hours a year. Faster, error-free quotes shorten the whole order-to-cash cycle and help close more of the pipeline.

04 AR DASHBOARD & REPORTING

Your whole receivables picture, live

One screen that shows where your cash is, and when it's actually coming.

THE PROBLEM

Between closes, AR is a black box. No one can see the real aging picture, which customers are slipping, or when cash will land, and the report that answers those questions takes up to two weeks to assemble by hand.

THE SOLUTION

A live dashboard, synced from QuickBooks, showing aging by bucket and by customer, a DSO trend line marked with your LunarLogic go-live date, and a payment-prediction score that forecasts when each invoice will actually be paid, based on real customer behavior, not contract terms.

ILLUSTRATIVE MOCKUP

Syncs live with QuickBooks, Xero, or your accounting platform, and delivers to Slack, Teams, or email, with no data migration required.

87%
PAYMENT-DATE PREDICTION ACCURACY

79%
FASTER CLOSE 14 → 3 DAYS

Live
REAL-TIME QUICKBOOKS SYNC

RESULTS

Month-end close compresses from **14 days to 3**, with **87%**-accurate payment forecasts and a DSO line the whole team can watch bend down against the go-live date.

TANGIBLE BENEFITS

Cutting month-end close from 14 days to 3 hands back about **11 days of senior accounting time every month**, on the order of 66 hours, or 790+ hours a year of controller-level capacity returned to higher-value work. Real-time DSO turns AR from a monthly autopsy into a daily steering wheel.

~66 hrs

THE ACCOUNTING IMPACT

What the automations do to your books

Speed is the visible benefit. The deeper return is what each module does to the financial statements themselves, under U.S. GAAP: when revenue is recognized and posted, how reliable the AR aging schedule is, and how much manual reconciliation it takes to trust the numbers at close.

Invoice Automation

REVENUE RECOGNITION

Under accrual accounting, revenue is recognized when earned, and the invoice is what posts that entry. Creating and sending it in ~90 seconds instead of days keeps receivables current, **cuts month-end work-in-progress to revenue reclass entries**, and standardizes GL coding at the moment of creation.

Payment Reminders

ALLOWANCE / BAD DEBT

A disciplined, consistent cadence produces a more accurate AR aging schedule, which feeds a **lower, more defensible allowance for doubtful accounts**, plus a timestamped collection history on every invoice, the record accountants and auditors want before supporting a write-off.

Sales Order Processing

DEFERRED REVENUE

The structured sales order ties revenue back to a customer commitment, cutting disputed and unbilled receivables and making **correct deferred-revenue and percentage-of-completion recognition** possible for firms that collect deposits or bill in progress.

AR Dashboard

CLOSE & RECONCILIATION

A live sync keeps the dashboard matching the general ledger, so at-risk receivables surface continuously and **reserve adjustments and write-off candidates are handled through the month** instead of during close, with AR pre-validated before the close even begins.

The net effect across all four modules. A business running the full suite is not just collecting faster; it is producing books that need less manual correction, a close that runs 79% faster, and financial statements an owner, a lender, or a buyer can trust without a lengthy reconciliation first, all on the ledger you already keep, with a complete audit trail on every transaction.

BEYOND THE RECOVERY

What the reclaimed time and cash make possible

Recovering the hours and pulling the cash forward is the mechanism. What a business does with them is the point. For a representative $2.5M service firm, moving from a 48-day to a 22-day DSO reshapes what the business can actually do next.

~$263K	~$178K	500+
TOTAL YEAR 1 VALUE UNLOCKED	WORKING CAPITAL RELEASED	HOURS RECLAIMED PER YEAR

Grow without borrowing

Every dollar parked in AR is a dollar a business tends to replace with a line of credit at 7 to 12 percent interest. Freeing roughly $178,000 funds the next hire, the next vehicle, or the next contract out of money already earned, instead of money borrowed against it.

Take on bigger work

At a 48-day DSO, every new job floats materials and labor for a month or more before payment lands. At 22 days that gap closes: hiring becomes a decision rather than a gamble, deferred equipment gets bought, and a large contract reads as an opportunity, not a liquidity risk.

Give accounting its time back

Manual AR consumes 500+ hours a year; the suite cuts that to under 100, an 80% reduction. That is roughly a full month handed back to the bookkeeper and controller, and organization-wide it is capacity redeployed from data entry and reconciliation to advisory and growth work.

A fourth return, harder to put on a stat card: financial credibility. A business with fast, consistent collections and an accurate aging schedule presents cleaner financials to a lender underwriting a line of credit, a bank financing equipment, or a buyer running diligence. Well-run collections are evidence of a well-run business, and that evidence shows up directly in the books.

"The point isn't collecting faster. It's what the business builds with capital that is finally free."

Illustrative figures for a representative $2.5M service firm moving from a 48-day to a 22-day DSO. Not a guaranteed result.

OUR MISSION

LunarLogic modernizes the accounting infrastructure of a business, module by module, starting with AR, until the entire financial operating layer runs automatically: without manual intervention, and without a consultant.
